LEADING ELEVATOR ROPE TECHNOLOGY

CTP COATED TRANSMISSION PRODUCTS

... the future starts now!

Reduce your investment costs by up to 40%.

A smaller rope diameter and smaller drive allow for a higher utilization of the elevator car given the same shaft size.

Reduce your maintenance costs by up to 100%.

CTP is a self contained system requiring no lubrication or maintenance.

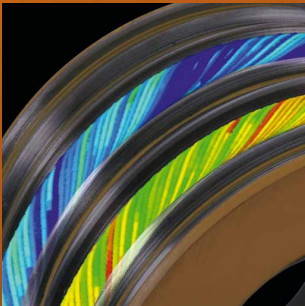

Experience greatly improved travel comfort.

The polymer coat absorbs vibration, significantly enhancing smooth running.

Increase the service life by at least the 3-fold.

Since the traction sheave and the elevator rope is not subject to wear, the frequency of rope replacement and the related costs are reduced.

BENEFITS OF CONTINUOUS DEVELOPMENT

Important insights are gained through simulation tests.

High-strength wire ropes combined with specifically designed polymers revolutionizes the traditional elevator technology.
